Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-5. (Canceled)

6. (Currently Amended) A data processing device comprising:

wireless telephone communication means for performing communication with a storage server on the Internet via a wireless telephone network;

wireless communication means for performing short-range wireless communication with a data storage device;

a display section for displaying a list, including at least titles and storage location information, so that a user can select a title from said titles, ~~on data that is stored in said data storage device and received from said data storage device~~ said storage location information indicating the storage location of file data containing the titles;

controller means for alternately controlling said wireless telephone communication means and wireless communication means to download said file data according to said storage location information corresponding to the selected title;

storage means for ~~receiving a portion of said data selected out of said list from said data storage device and~~ storing ~~the portion of~~ said downloaded file data; and

data processing means for performing a predetermined process using said ~~received~~ downloaded file data.

00211255

7-8. (Canceled)

9. (Currently Amended) The data processing device according to claim ~~8~~ 6,

wherein ~~data stored in said first data storage means and data stored in said second data~~ ~~storage means are~~ said file data includes music data, and

wherein said data processing means reproduces ~~received~~ the music data ~~and wherein an~~ ~~earphone is provided for outputting reproduced music data~~.

10. (Currently Amended) The data processing device according to claim ~~8~~ 6,

wherein ~~data stored in said first data storage means and data stored in said second data~~ ~~storage means are~~ said file data includes moving image data, and

wherein said data processing means reproduces ~~received~~ the image data and displays the reproduced image data on ~~a~~ the display section.

11. (Currently Amended) The data processing system according to claim ~~10~~ 6,

wherein said data processing device receives ~~said selected~~ portion of data selected from said list ~~from said data storage devices to store the portion of~~ in said file data to store said portion of data, and

wherein said data processing device ~~in said storage means and~~ reads out ~~the~~ said portion of data from said storage means by a predetermined amount to perform said predetermined processing before the completion of storage of said portion of data.

12. (Currently Amended) A data processing method comprising the steps of:

receiving a list ~~on data~~, which includes at least titles of data and storage location

information of said data, from a first data storage ~~stored in a first data storage device and data~~

~~stored in a second data storage device connected onto a network via a wireless telephone~~

~~network for storing predetermined data from said first data storage device~~ using wireless

communication means;

displaying said received list;

selecting a title of data from said titles of data;

downloading said ~~requesting a portion of~~ data of said title ~~selected from said list~~ from

said first data storage device using said wireless communication means or from said second data

storage device using ~~said wireless communication means or~~ wireless telephone communication

means according to said storage location information corresponding to said title;

storing said ~~received~~ downloaded data; and

performing a predetermined process using said ~~received~~ downloaded data.

13. (Canceled)

14. (Currently Amended) A program storage medium for making a data processing

device execute a program, said program comprising the steps of:

receiving a list, which includes at least titles of data and storage location information of

said data, from a first data storage ~~on data stored in a first data storage device and data stored in a~~

~~second data storage device connected to a network via a wireless telephone network for storing~~

~~predetermined data from said first data storage device~~ using wireless communication means;

displaying said received list;

00211255

selecting a title of data from said titles of data;

downloading said ~~requesting a portion of~~ data of said title ~~selected from said list~~ from

said first data storage device using said wireless communication means or from said second data

storage device using ~~said wireless communication means or~~ wireless telephone communication

means according to said storage location information corresponding to said title;

storing said ~~received~~ downloaded data; and

performing a predetermined process using said ~~received~~ downloaded data.

15. (New) A data processing device comprising:

wireless telephone communication means for performing communication with a file

server via a wireless telephone network;

wireless communication means for performing wireless communication with a data

storage device;

a memory to store at least titles and storage location information, said storage location

information indicating the storage location of file data containing said titles;

a display to display at least said titles;

selection means for selecting a title among said titles;

a controller to control downloading of said file data corresponding to said selected title,

wherein said controller alternately controls said wireless telephone communication means

and said wireless communication means according to said location information of said selected

title; and

a decoder to decode the downloaded file data.

00211255

16. (New) The data processing device according to claim 15, wherein said at least titles

and storage location information are received from said data storage device via said wireless

communication means.

17. (New) The data processing device according to claim 15, wherein said downloaded

file data is music data.

18. (New) The data processing device according to claim 15, wherein said downloaded

file data is moving image data.

19. (New) A data processing method comprising:

displaying at least titles and storage location information, said storage location

information indicating the storage location of file data containing said titles;

selecting a title among said titles;

controlling to download said file data corresponding to said selected title, using wireless

telephone communication means configured to perform communication with a file server via a

wireless telephone network or wireless communication means configured to perform wireless

communication with a data storage device, according to said storage location information of said

selected title; and

decoding said downloaded file data.
